

White Pines Wind Project

- *As residents of Prince Edward County we object to installations of White Pines turbines that will obstruct familiar views from many places, e.g., driving or walking Old Milford Road and Scott's Mill Road above the Mill Pond, playing sports on the grounds, attending the fair or participating in the Easter parade and other events, where we always make professional pictures and send them all over the world.*
- *The community's opinion counts in this matter and not the industry which always finds excuses for everything to make big bucks as in this case. In your opinion, T4 and other turbines will (in the words of the study) "detract from an understanding of Mount Tabor ... or its greater context" when seen from the grounds and from multiple points around the village, especially from Old Milford Road and above the Mill Pond. What a shame to destroy that historic valuable view!*
- *We herewith request/demand that the government respects Prince Edward County's designation by-law and require wpd to eliminate any turbines that will diminish or destroy Mount Tabor's protected values. Mount Tabor must remain "Highly picturesque on its height above the Mill Pond" and "virtually unspoiled since its construction in 1865." The Municipality passed the 1986 by-law to protect these special qualities for future generations, including after 2054 - the potential end of the White Pines project. Anything that damages Mount Tabor's picturesqueness or unspoiled character for such a long period is unacceptable to the community and for every picture taken a shameful event.*
- *Wpd's turbines must not harm the view of the steeple as "the emblem and focal point of Milford."*
- *Protecting the cultural heritage of Mount Tabor and Milford is more important to us, our family, friends, visitors and for every tourist also for most of all residents of the "COUNTY" than wpd's profits.*
